

### **Before the injection:**

1. Ladies: PLEASE do not wear eye make-up to your appointment.
2. Bring a driver.

### **What to expect after the injection?**

1. Although during the procedure, your eye is numb with gel, some patients feel the pain a few hours after the injection.
2. Your eye will be scratchy and have a red spot on the surface.
3. You may see a bubble or a black circle (floater) in the eye. Don't get worried as that is the medicine. You will notice the bubble disappear in a day or two.
4. You may be given a prescription ointment to be applied 3 times a day for three days and it will blur your vision for some time.

### **After the procedure, you are advised to do the following:**

1. **Do not** rub your eye, get soap in your eye, or get water in your eye for 1 day after the procedure.
2. You should take Tylenol to make you feel comfortable.
3. No eye make-up for 2 days after you injection.
4. If you feel the eyelid swollen, you can do warm compresses.
5. If you feel eye soreness, you can apply ointment as prescribed by Dr. Khetpal.

**If the pain is severe and you have decreased vision and eyelid swelling this may be a sign of infection, please call us immediately at 903-337-0055. The doctor is available to answer your questions even after hours.**
